<b>Safety Recommendation Status:</b>	Implemented, closed

**Safety Recommendation:**

Aer Arann should institute a Flight Data Monitoring (FDM) program across its fleet.

**Response:**

A letter was received from Aer Arann, dated 30 August 2013 stating that:

- Aer Arann has a FDM program installed across all variants of company aircraft.
- All new aircraft entering service have FDM installed.
- The FDM program is part of a managed service whereby detailed analysis of every months flying is received via a third party FDM service provider. This information is reviewed by the Flight Ops department and Flight Safety office in order to identify and address any adverse trends.
- Following the review of the monthly Flight Data information, a summary of each months data is fed back to all pilots ensure they are informed of trends and areas of focus.
